Education

- **Boston University** Boston, MA
 - *Bachelor of Science in Computer Science (GPA: 3.2)* *Expected Graduation: 2026*
 - Relevant Coursework: Data Structures & Algorithms, Database Systems, Fullstack Development, Machine Learning, Data Science, ML for Business Analytics
 - Transferred from UMass Boston (Computer Engineering) in 2023

Technical Skills

- **Programming Languages:** HTML, CSS, JavaScript/TypeScript, Bash, Python, Java, C, SQL
- **Frameworks & Libraries:** React, Next.js, Node.js, Express, Spring Boot, Flask, MUI, Tailwind CSS, Firebase, scikit-learn, NumPy, pandas, Matplotlib
- **Databases & Caching:** MongoDB, Redis, Firebase Firestore
- **Developer Tools:** Git, GitHub, Vercel, Postman, Google Cloud Platform

Projects

- **BU Transit Tracker Web Application (Next.js, TypeScript, Node.js, Redis, Google Maps API, Vercel):**
 - Built **full-stack real-time bus tracking application** integrating BU TransLoc API and Google Maps to display live positions, routes, and ETAs for **3+ bus lines**
 - Implemented **Redis caching layer** reducing external API calls by **60%** and latency to **under 100ms** for high-frequency updates
 - Deployed on **Vercel with CI/CD pipeline** for automated builds/deployments, achieving **99.9% uptime**
- **Airbnb Price Prediction Model (Python, scikit-learn, pandas, NumPy, Matplotlib, XGBoost):**
 - Designed **supervised ML pipeline** predicting Airbnb prices across **76K+ records**, achieving $R^2 = 0.71$ with Random Forest and reducing RMSE by **35%**
 - Performed **feature engineering on 20+ attributes** using imputation and log transformations to handle **15% missing data** and skewed distributions
 - Compared **5 baseline models** with tree-based ensembles and tuned hyperparameters using GridSearchCV for optimization
- **To-Do List and Calendar Integration (React, Express, Firebase (Firestore & OAuth), Axios):**
 - Developed **full-stack task manager** with React frontend and Express backend, persisting tasks in **Firestore** with real-time updates
 - Implemented secure **authentication via Google/GitHub OAuth** with persistent session management and offline accessibility
 - Designed **RESTful API endpoints** for CRUD operations with error handling and data validation
- **Multi-threaded Image Processing Server (C, POSIX Threads, Sockets, Semaphores):**
 - Built **thread-safe C server** with FIFO queue and **8 worker threads** handling image operations with **5x throughput improvement**
 - Used **mutexes and semaphores** to eliminate race conditions, improving stability under **100+ concurrent requests**
 - Implemented socket-based communication supporting **3 image operations** with request parsing, response formatting, and graceful shutdown
